

Regex: Validating Roman Numerals

Problem Statement

You are given a string and you have to validate whether it's a valid Roman numeral. If it is valid, print True, otherwise print False. Try to create a regular expression for a valid Roman numeral.

Input Format

A string containing Roman Characters

Output Format

A one line string containing True or False

Constraints

The number will be between 1 and 3999 (both included)

Sample Input

```
CDXXI
```

Sample Output

```
True
```
